Residence Landscape Lighting Project

SWITZERLAND

It was designed to support the minimalist and clean-lined concept of the Ermatingen Villa, which has a simple yet functional and stylish architectural design; functional and decorative lighting of the building façade and landscaped area, including pathways. The **Galata Outdoor Wall Sconce**, which emphasises the aesthetics of the sharp exterior lines, and the Neptune XL Bollard, with its timeless, intriguing design, have been used to highlight and illuminate the paths around the building and the stairs leading down to the garden.

In accordance with the dark sky criteria, a contemporary example of environmental lighting has been implemented with a design that does not create light pollution. **Neptune XL bollard**, which is a garden luminaire with IP66 protection class, which is highly resistant to weather and environmental conditions, also has led technology that does not disturb the visual comfort and provides the most efficient presentation of artificial light.

Villa Garden Lighting Project

Antalya / TURKEY

Alanya, a popular holiday resort in the province of Antalya, is a natural wonder located between the Taurus Mountains to the north and the warm beaches of the Mediterranean to the south. The city, which developed under Roman, Seljuk, and Ottoman rule, became an important location that even served as a capital. The city, established at the foot of Alanya Castle, has grown in parallel with the castle, which still stands today, and has evolved into a modern city. The residential project where the lighting project was implemented also features a modern architectural style that reflects the appearance of today's Alanya. The land, located within a large green area, is right next to the sea. The lighting products in the building area adjacent to the sea, which is similar in style to Antalya's famous cliffs, have been selected to enrich the appearance of the building and provide effective lighting.

ENCG Tangier Landscape Lighting Project

2024

Tanca / MOROCCO

The city of Tangier is an ancient city located at the end of the Strait of Gibraltar, where settlement began 10,000 years BC. This city, which has hosted different cultures and peoples, still preserves its multiculturalism. An important Moroccan city because of its geographical location, Tangier has preserved its cultural wealth from the past to the present. ENCG Tangier, the country's most important and prestigious business school, was founded in 1995 in this beautiful cultural city. The school trains businessmen and managers who will play an important role in the country's future.

ENCG Tangier, a modern educational institution, has reflected its philosophy in its architectural appearance and a more modern concept has been defined for the renovation. As part of the renovation and landscaping of the 2024 garden area, modern design, durable Fortress LED garden luminaires, Galata LED wall luminaires and Pluto L LED floodlights were chosen to illuminate the outdoor areas.

The Bugibba Playground Lighting Project

Bugibba / MALTA

Settled since ancient times, Malta has hosted a variety of cultures and religions from Phoenicians to Romans, Christians to Muslims in the heart of the Mediterranean. Malta's multicultural structure continues to the present day, and is particularly notable for its historic buildings and cultural heritage, which has been preserved to the present day. The town of Bugibba, where the lighting project is located, is one of Malta's most visited tourist areas as a popular north coast resort. Shaped by its own unique island architecture and intertwined with historic buildings, the town is also a dynamic area with modern hotels and restaurants.

Our aim is to add value to the area in which we design and manufacture the luminaires, with the perspective that outdoor lighting products are not just an accessory in urban life, but a part of everyday experience. The choice of products for the lighting of the park, which also includes residential and tourist areas, has been made with a view to providing a harmonious and even enhancing effect for the area, both in terms of design and lighting objectives. The effect of visual comfort provided by the **Neptune luminaire** has provided environmental integrity with the aesthetic and timeless lines of the design.

A special coating and painting process was used on the Neptune Urban Light poles to withstand the challenging environmental conditions of the island, full of abrasive and corrosive factors.

Hotel Landscape Lighting

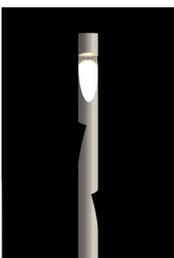

Benghazi / LIBYA

From the ancient ruins of Leptis Magna to the day of Tripoli, Libya has a wide range of architectural styles that can be showcased in the lighting design which inspired us. The Libyan landscape is a stunning combination of natural beauty, ancient culture, and openness to modern architecture. The hotel landscape lighting project that we complete in the last quarter of 2022 in Libya was a unique opportunity to highlight the country's rich history and showcase its architectural wonders while enhancing the beauty of the natural surroundings.

Lighting products are used in a wide section including the garden area, walking paths, activity areas, and personal use areas of the customers, have taken an active role in the project with their functional design. **Callisto Lighting Pole**, which can give 360 degrees of light, is supported by highly efficient led chips and a led driver that can withstand the harsh weather conditions of the country. Thanks to its marine-grade coating, it is resistant to sandstorms and the corrosive effects of sea salt carried by the wind.

Jarve Keskus Landscape Lighting

2023

Tallinn / ESTONIA

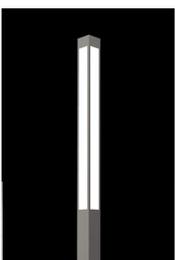

Enter the outdoor lighting pole project, a venture aimed at enhancing the aesthetics, safety, and overall experience of visitors to Jarve Keskus. This endeavor not only brightens the physical space but also symbolizes the vitality and progressiveness of Tallinn's urban landscape.

Jarve Keskus enjoys a prime location in the bustling district of Mustamäe, Tallinn. Situated at the intersection of several major roads, including Pärnu Highway and Ehitajate Road, the mall serves as a pivotal hub for locals and tourists alike. Surrounding the mall are a blend of residential neighborhoods, educational institutions, and commercial establishments, forming a vibrant tapestry of urban life.

However, despite its centrality, the area around Jarve Keskus experiences subdued lighting after dusk, creating pockets of darkness that may deter foot traffic and compromise safety. Moreover, the absence of adequate illumination detracts from the visual appeal of the mall and its surroundings.

Kartepe The Ottoman Daily Life Museum

The Ottoman Daily Life Museum, which was realised by the municipality of Kartepe district, which is especially known for its snow tourism and natural beauties, started to host its visitors since 2023. The artefacts offered to visitors by the museum, which is located in the heart of nature with its location; living spaces, public spaces, clothing and culinary traditions, culture, shopping, such as daily life elements. In the open areas, there are also artefacts from the period, an excavation area for children and a recreation garden. In the lighting project we realised for the illumination of outdoor activity areas, garden lighting bollards were used in landscape areas and roads in the area, and **modern lighting poles** were used in the building perimeter and entrance areas.

The project's architectural harmony and aesthetic goals were achieved by using outdoor lighting fixtures that complement the museum's Ottoman-style Anatolian aesthetic. A decorative lighting plan was created using bollard lights and lamp posts from the **Anatolian Urban Lighting Collection**.

Modern Outdoor Lighting on Gorgiladze Street

The specific area of the project is a park situated along Gorgiladze Street, which serves as a green oasis for residents and visitors. The park is surrounded by a variety of amenities, including cafes, shops, and residential buildings, enhancing its role as a central gathering place for the community. The park's landscape features manicured lawns, walking paths, benches, and playgrounds, making it a popular spot for relaxation and leisure activities.

The modern outdoor lighting pole project undertaken for the park landscape on Gorgiladze Street aims to enhance both the aesthetic appeal and safety of the area during evening and nighttime hours.

Manama Urban Lighting Poles installed have a sleek and modern design that complements the urban and green environment of the park. The poles design focus on both functionality and aesthetics. The design of the poles ensures they blend seamlessly with the surrounding landscape, avoiding any visual disruption to the park's natural beauty.

The project utilizes energy-efficient LED lights known for their long lifespan and low energy consumption. LEDs provide bright, clear illumination, enhancing visibility and safety.

Potocari Han Landscape Lighting Project

Srebrenica / BOSNIA

Potocari Han, which has witnessed the most painful events of history and emerged as a project to erase the traces of this pain and to develop the region and support the people of the region, is a business that hosts various indoor and outdoor organisations as well as accommodation services. Especially within the scope of the meaningful Peace March organised every year on behalf of those who lost their lives in Srebrenica, the city receives a large influx of visitors. It has become a popular destination with accommodation, restaurants and event areas for people visiting the city for the commemoration ceremonies and various organisations. The outdoor lighting project of the complex, which consists of two main buildings and 3 buildings among the greenery and the large garden around them, was made with lighting poles in 2023.

The **Fortress Lighting Pole** contributes to the determination of the boundaries between the buildings, while a warm atmosphere is created within the Potocari Han landscape area. Equally illuminated circular areas were created in the garden area with a diffuser with a symmetrical light distribution. It has contributed to drawing the boundaries of the event areas and creating efficient activity zones. Anthracite body colour, which creates a contrast in the greenery, was preferred for the coating of the lighting poles in the heart of nature. A lighting plan has been designed to ensure the visual comfort of the people using the activity areas and walking paths between the buildings built in accordance with the architectural concept in the region. All decisions on light levels, light colour and pole height were taken in line with this landscape lighting plan.

Souq Al Wukair Parking and Landscape Lighting

Souq Al Wukair is an area where hotels, restaurants and shopping buildings are located, built on the site of the city of eki Al Wukrah, which has a history of about 200 years. The old and the new are combined in this area where the historical local architecture is maintained and offers an impressive unity.

Preon Lamp Post, which is dominated by oval and circular lines, created a whole with the architecture. The garden lamp post enriched with cast aluminium accessories and pedestal added a visual richness to the landscape area. Efficient lighting was targeted in the vehicle entrance and exit areas where asymmetric light angle was applied. An opaque diffuser glass was preferred to eliminate the glare of light.

Carina Pathway Light was used to ensure safe passage of pedestrians on the walkways. The garden lighting fixture, which was installed in an area close to the beach, is extremely resistant to the corrosive effect of salt and sand carried by the sea thanks to its injection aluminium cast body and double layer coating.

Telavi City Street Lighting Project

Telavi / GEORGIA

Located in the east of Georgia, 159 km from the capital Tbilisi, Telavi is the most prominent city in the Kakheti region with its development and history. As you tour the city and witness the splendour of the Alaverdi St George Cathedral, you may come across our lighting columns as you visit the streets surrounding this wonderful structure.

The **Preon Street Lighting Pole** was selected and implemented as part of the Georgia Renewed Regions project to create a landscape in harmony with all urban elements in the reconstruction of the city. As part of the lighting project in the streets of Telavi, which consist of old-style cobbled streets with vehicular and pedestrian traffic, 100 Preon Street Lighting Poles were installed along the tourist area. The lighting columns are made of renewable aluminium material and steel and are coated with two layers of special anti-corrosion paint technology to support their strong structure.

Zugdidi Boulevard Lighting Project

Zugdidi / GEORGIA

Zugdidi Boulevard, a central and vital part of the city, stretches through the heart of Zugdidi. The boulevard is surrounded by a blend of historical landmarks, residential areas, and commercial establishments. Prominent structures such as the Dadiani Palace, Zugdidi Botanical Garden, and various cultural centers are located nearby, making the boulevard a bustling hub for both locals and tourists.

The classical outdoor lighting pole project is designed to blend seamlessly with the aesthetic and historical essence of Zugdidi Boulevard. The project encompasses the installation of a series of lighting poles that feature classical design elements, ensuring they enhance the overall ambiance without overpowering the historical significance of the area.

Epsilon Garden Lighting Poles will feature a classical design, characterized by ornate details and elegant curves. These elements are inspired by traditional European street lamps, reflecting the historical and cultural heritage of the region.

CA Rosetti Park Lighting Project

Lasi / ROMANIA

Iasi, a contemporary city in north-eastern Romania with a vibrant cultural and social scene and a climate that experiences all four seasons, is also home to advanced technology companies. Known as the capital of education, Iasi is home to five state universities and 60,000 students. This emphasis on education and technology symbolises the city's forward-looking approach. This vision is also evident in the social spaces being built in the city, which reflect important **contemporary** issues such as energy efficiency and sustainability. The same vision is also evident in the public park that has been dedicated to CA Rosetti, one of the country's iconic figures.

The energy policy of the city is reflected in the products used throughout the park, including the Andromeda street luminaires and the **Callisto Bollard** city lighting luminaires. These products use contemporary and modern technologies. Thanks to the integrated DALI control system, lighting levels can be precisely adjusted and controlled, and the luminaires can be operated individually or in groups. Functions such as timing, scenario creation and sunrise/sunset tracking can also be easily integrated.

Private Residence Project

Istanbul / TÜRKİYE

There is a 2-storey residence and a large garden area with a carefully designed landscape area, recreation area and swimming pool. The key points of the project were that the selected products both visually complement the landscape and support the architecture of the lighting. When the criteria determined for the suitability of the luminaires to be selected were evaluated, wooden bollard light with long life and aesthetic, efficient led technology integrated, environmentally friendly and recyclable material technology and wooden lamp post from the same collection were preferred. Wooden lighting pole with a length of 2 metres was used to illuminate large areas in the garden and 3000K was preferred to create a warm atmosphere in large areas. One metre **wooden garden light products** were used around the pool and in the area with short ornamental plants.

Creating environments where we can relax and relax in our homes where we leave behind the tiring and stressful life brought by daily life really makes a difference in our lives. In outdoor areas such as gardens, the role of light and lighting is very important in creating warm atmospheres that will allow us to relax mentally and physically. In order to feel the relaxing effect of light,

Masdar City Central Park Lighting - Phase 2

Masdar City is built 12km east southeast of Abu Dhabi city, next to the city airport. The city will be connected to the existing urban areas by roads and light rail systems, and its entire infrastructure is based on the concept of sustainable energy and technology. The design of the city is based on the philosophy of economic, social, and environmental sustainability. In the city where only solar energy will be used, a zero waste and zero carbon policy will be followed.

Masdar City includes residential areas, commercial businesses, restaurants, cafes, and social activity areas created with the main principles such as livable quality areas for its residents, natural systems compatible with the environment, comfort in outdoor areas, and waste management. One of the most important points for the residents and visitors of the city is the city parks with their modern concept. The city park in Masdar is one of the exemplary living spaces in the world, with innovative sustainable outdoor elements, cutting-edge approaches that capture fog to recycle water and use it for irrigation, and creative solutions that use the wind to cool the city.

Car Dealership Landscape Lighting

Uhingen / GERMANY

Uhingen is a city in the district of Göppingen in the state of Baden-Württemberg, Germany. The project of illuminating the open parking area, where the car gallery belonging to a private company located within the borders of the city, exhibits vehicles, was carried out in 2021. In this lighting project, the double arm option of our Cobra Lighting Pole model was chosen.

The project had to consider the lighting requirements of open parking spaces as well as the appropriate display of vehicles. The locations of the lighting poles were determined according to the width of the priority area and the placement of the vehicles, and the settlement was made so that the whole area had the necessary lighting. In the area where homogeneous lighting is created, the level of illumination is at a level that will provide visual comfort and it has provided significant energy savings compared to the old-type lighting fixtures used in the area.

Lighting that allows customers to move around the area comfortably and safely is thanks to our efficient LED luminaires and a good lighting design. Light34 Lighting will continue to serve you in your lighting projects in parking lots and outdoor product display areas.

St. John the Baptist Church Landscape Lighting

Jezzine / LEBANON

Lebanon, located on the Mediterranean coast, is a small country in terms of area, but it has a great historical depth and heritage that reflects the influences of both Eastern and Western cultures. Lebanon, which was the homeland of the Phoenicians in ancient times, was under Ottoman and then French rule. Lebanon, a unique country with its historical and natural beauty, is home to the city of Jezzine, surrounded by pine forests and green valleys, and famous for its waterfall. With its impressive natural scenery, the town of Jezzine is a region where Maronite Christians live in large numbers. The town of Jezzine, which also includes the village of Karkha, home to the historic St. John the Baptist Church, is an interesting place for nature walks and wine tasting.

The historic religious structure in Lebanon, located in a historically rich region, is now a tourist attraction that hosts various religious events and organisations in its gardens and interior spaces. As a result, a functional and purpose-driven lighting project was designed for the structure's exterior spaces. Single-console lighting poles 7 metres high were used on the roads leading to the complex, while double-console lighting poles were used in the large garden area at the entrance to the structure.

Masdar City Central Park Lighting Project

As Light34 Lighting, we constantly think and work so that lighting is a part of life that appeals to the soul and nature, away from only a technical detail, and makes life easier for people. Our designs are shaped by the principles and discipline of our company in line with the wishes and demands of our customers, as in this project.

With our new outdoor lighting element model, we strive to add value to Dubai's vibrant and original vision. We concentrated on light color, anti-glare, and lighting specifics, and planned lighting accordingly, to create an architectural idea in harmony with the building around the building with contemporary contours. Under the provisions of the Light34 Green Policy, which we maintain for environmentally sustainable and effective use of lighting, a development process has been planned.

Our lighting project's main role was uplifting and enhancing the overall appearance of the applied area. We took consideration of the architectural concept as a starting point for the project and strive to achieve reflect the glory of the amazing landscape. Unique **Anatolian Lighting Pole** and **Anatolian Bollard Light** were designed and implemented to use for outdoor lighting area. One again design on inspirations from nature, the form, and architectural concept reflections are used for shaping the true product for the right area.

Sharjah / UAE

Sharjah National Park Landscape Lighting

Sharjah may not be as well known as Dubai or Abu Dhabi, but it is a city with a long history of settlement and a vibrant cultural life. It has a strong identity that preserves its historical character and texture, as well as its modern city image. The National Park is the city's largest activity and recreation area. Strategically located sports facilities, including basketball, football and handball courts, as well as children's play areas, offer residents and tourists an impressive park in which to enjoy leisure time and sports activities.

Adjacent to Sharjah International Airport, this expansive park is teeming with diverse flora and fauna, including various trees under which you can relax. Our **aluminium cast lighting poles** complement the lush greenery throughout the park. In designing the lighting project, we aimed to create a design that is as decorative and visually appealing as it is functional, with the comfort and convenience of people in mind.

The poles are extremely durable in outdoor conditions thanks to a specially designed outdoor coating process tailored to the area. A double coating system and special protection have been applied to withstand the abrasive effects of wind-borne sand and humid air. Transparent luminaire glass protects the light output and prevents dust from affecting it, ensuring that it remains unaffected. The highly UV- and heat-resistant luminaire glass is also ideal for long-term durability.

Marmaris Adventure Park

2018

Muğla / TÜRKİYE

Along the shoreline of the Turkish Riviera, Marmaris is a town in Mugla, one of the most attractive touristic destination, in southwest Turkey. In historical documents, it is mentioned that Marmaris found in 6th BC and was known as Phykos (Ancient Greek). From ancient times to modern-day Marmaris keeps preserving its natural beauty with alongside modern developments.

We collaborated with Marmaris Municipality for one of the unique landscape lighting projects for park lighting. We offered a plan that aims to create energy-efficient, sustainable lighting spaces to improve the quality of life. After an evaluation process of the architectural layout and design, we suggested local authorities use **Galata Series** modern design outdoor bollard light, which manufactures in Istanbul by Light34, for the pathway which has a breathtaking view.

The Atrium Mall & Tower

Manama / BAHRAIN

The Kingdom of Bahrain is a multi-ethnic society and has the fastest-growing economy in the Arab world in addition to be a popular tourist destination in the Persian Gulf. Bahrain is famous for its impressive mosques, burial mounds, and traditional markets. The kingdom combines modern Arab culture and the archaeological legacy of five thousand years of civilization. The island is home to forts including Qalat Al Bahrain which has been listed by UNESCO as a World Heritage Site.

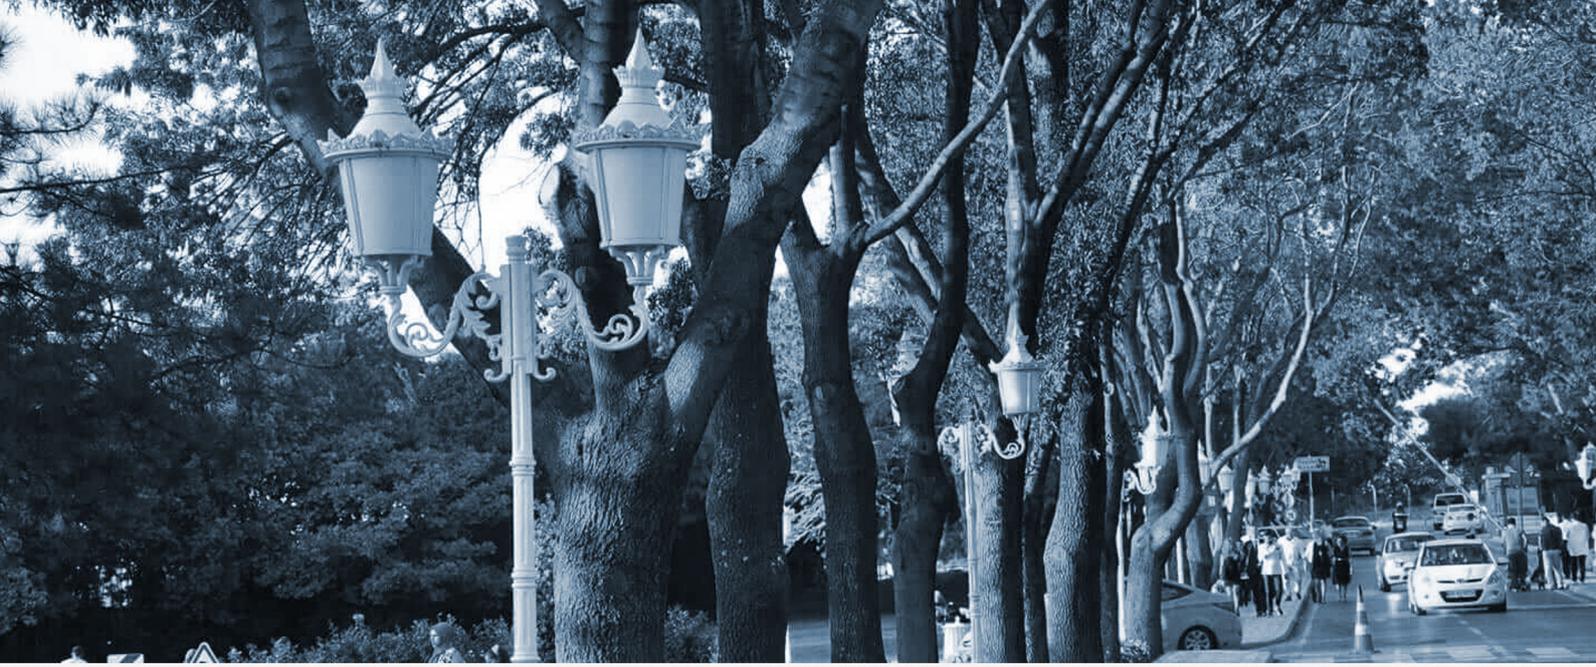

We worked with a local partner in Bahrain to develop outdoor area lighting design of Atrium Mall and Tower shopping mall lighting project. The first thing in the project that you can notice is an alternative outdoor garden area experience which is not common in comparison with regular applications. So, we decided to use a Manama Series custom made lighting pole model add extra attention to the garden area. As a part of our landscape lighting solution, we integrate our lighting fixtures to the architectural concept.

PORTFOLIO

Gulhane Park

2014

Istanbul / TÜRKİYE

Gulhane Park is one of the oldest and most historical parks in Istanbul and has very important place in Turkish history. Gulhane Park is one of the ideal spots for you to rest under the centuries-old trees and read books, get away from the noise and crowds of the city and walk on the paths full of colorful flowers.

Ataturk's first statue erected in Turkey are located here. The statue was made by the Austrian Kripel and erected in 1926 where it is now. Moreover, in the ceremony held in Gulhane on November 24, 1928, Ataturk was given the title of "Head Teacher". Ataturk introduced the Latin letters to the public on the blackboard he founded and gave his first lecture here.

Orion Series Garden Lighting Pole and Fixture, which has emerged from the combination of traditional design and elegant lines, has been preferred to be suitable for the historical atmosphere of Gulhane Park and to contribute to the integrity of the garden lighting application area. **Orion Series Bollards** is also requested to be the part of the landscape lighting project as the illuminate the side walkways and landscape area with led bulbs.
